2/7/2013

The purpose of the **SharePoint 2012** samples is to demonstrate the scripting capabilities of PowerShell using the SharePoint 2012 PowerShell features.

Important:
Samples are provided for educational purposes only. They are not intended to be used in a production environment and have not been tested in a production environment. Idera does not provide technical support for these samples. Sample applications should not be connected to or used with your production environment without the permission of the SharePoint administrator.

Scenario

The sample scripts demonstrate usage of the Sharepoint PowerShell features. The scripts can only be run directly on the SharePoint server because it relies on SharePoint 2012 PowerShell features that are only installed on the server as part of the SharePoint installation (See Prerequisites for more information).

Please load each script into PowerShellPlus Professional Edition and review before running. After running each script, use the Interactive Console to review the results.

Tip:
The Interactive console opened for viewing while editing a script or you can click on the Console tab in the Code Editor.

Languages

PowerShell v2.0

Prerequisites

Before running this sample, make sure the following software is installed all on the same computer:

- SharePoint 2012
- PowerShell v2.0

Running the Samples

The following procedure shows how to run the samples.

1. From PowerShellPlus Script Editor, open **any sample** script.

2. Select the Execution tab and Click **Run**.
